

Consultant Quick Start

Field · Value

Document ID · DOC-008-CO

Version · 0.8.0-draft.1

Product version · v0.8.0 target; accepted behavior through v0.7.0

Status · Draft

Owner · Operations Lead

Classification · Confidential — VirtCruise Internal Operations

Last reviewed · 2026-08-03

Purpose

Handle customer, quote, and booking enquiries accurately while staying within accepted Consultant access and escalation boundaries.

Who should use this guide

New Consultants with approved tools and policy. The released evidence does not establish a Consultant back-office mutation/search screen and denies Finance Operations Portal access; use only separately approved Consultant sources.

Important: This guide does not grant access and does not replace DOC-002 through DOC-007, DOC-009, or DOC-010. Do not redefine a DOC-007 state.

Daily workflow

Open assigned work → Verify customer and reference → Read authoritative record
→ Explain or route → Record outcome/owner → Secure handover

Top 10 tasks

1. **Open assigned work.** Use only the approved Consultant queue/source; never search through a role or portal you are not authorised to use.
2. **Verify the customer.** Follow approved verification before discussing protected quote or booking detail. Record only the result, never secret answers.
3. **Look up a customer.** Use the approved customer reference and minimum necessary data. If no accepted lookup source is available, escalate—do not improvise.
4. **Look up a booking.** Use the exact booking reference in the approved source and distinguish booking status from quote, payment, review, or notification status.
5. **Support a quote.** Confirm the current quote, dates, travellers, services, customer-visible notes, value, currency, and eligibility. Do not promise availability or final confirmation.
6. **Explain acceptance.** Tell the customer that an eligible quote can be accepted from their owned view; acceptance begins booking progression but is not Booking Confirmation.
7. **Communicate clearly.** State what is known, current customer-safe status, action owner, next step, and any policy-approved expectation. Use DOC-007 wording.
8. **Route Finance questions.** Send bank instructions, transfer verification, Payment, Receipt, balance, or refund matters to Finance with safe references. Consultants cannot enter Finance operations.
9. **Route operational issues.** Send booking progression, travel readiness, service fulfilment, or cancellation-policy issues to Operations with customer impact and travel proximity.
10. **Close or hand over.** Record observation, action, receiving owner/reference, and what the customer was told. Keep communication ownership until handoff is acknowledged.

Quick checklist

Start-of-day checklist

- ☐ Confirm approved Consultant access and current communication routes.
- ☐ Review assigned work, travel-imminent cases, and acknowledged handovers.
- ☐ Open DOC-005 for communication/escalation and DOC-007 for status meaning.

Top task checklist

- ☐ Verify customer identity and record ownership.
- ☐ Match the exact quote/booking reference.
- ☐ Read the authoritative detailed record and current state.
- ☐ Answer only within Consultant knowledge and authority.
- ☐ Record a concise outcome or acknowledged escalation.

End-of-day checklist

- ☐ Update open customer communications with approved expectations.
- ☐ Hand over travel-imminent, financial, privacy, security, or incident risks.
- ☐ Close customer records, clear unsafe notes/downloads, and sign out.

Common mistakes

- Assuming Consultant status grants customer search, mutation, or Finance access.
- Calling a quote accepted, an invoice paid, or a message sent "booking confirmed."
- Copying internal comments or speculative diagnoses into customer communication.
- Promising price, availability, refund, response time, or replacement proof eligibility.

Do's and don'ts

Things you should always do

- Verify, use exact references, and separate each lifecycle.

- Use factual, customer-safe language and preserve the communication trail.
- Escalate access gaps instead of borrowing credentials or another role's screen.

Things you must never do

- Access Finance proof, review, Payment, Receipt, Ledger, or internal notification data.
- Change booking or lifecycle state directly or tell another team to bypass workflow.
- Ask for passwords, codes, reset links, unnecessary financial data, or proof through ordinary messaging.

Escalation

Issue · Owner · Escalate when · Do not escalate when

Quote content/availability · Consultant lead / Operations · Current approved source cannot resolve it or customer impact is material · The current quote answers the question

Payment/Receipt/bank transfer · Finance · Any verification, balance, allocation, receipt, refund, or bank-detail decision is needed · The customer only needs the approved Finance route

Booking progression/travel · Operations · States conflict, fulfilment is blocked, or travel is near/in progress · The authoritative booking already shows the expected next step

Account access · Support/Administrator · Safe customer steps fail or role access is incorrect · User has not followed the current valid flow

Privacy/security · Security/Privacy · Immediately on suspected compromise, malicious content, or data exposure · Never investigate beyond safe preservation

Use DOC-003 for operational ownership and DOC-004 for Finance boundaries. Do not escalate routine questions without first checking the current approved source.
