

Content Editor Quick Start

Field · Value

Document ID · DOC-008-CE

Version · 0.8.0-draft.1

Product version · v0.8.0 target; accepted behavior through v0.7.0

Status · Draft

Owner · Content Lead

Classification · Customer confidential — NDA required

Last reviewed · 2026-08-03

Purpose

Prepare complete package drafts and move immutable versions through independent review and controlled publication.

Who should use this guide

Content Editors and, where explicitly noted, independent Approvers. The Content Studio interface is planned; use this guide with the accepted service/workflow and DOC-006, not as evidence that an unreleased screen exists.

Important: This guide does not replace DOC-002 through DOC-007, DOC-009, or DOC-010. DOC-007 owns lifecycle meaning; only DRAFT is editable.

Daily workflow

Check assigned packages → Edit one DRAFT → Preview/check
→ Submit immutable version → Independent review → Schedule/publish
→ Verify public projection and record handover

Top 10 tasks

1. **Confirm package and version.** Match business code, version number, source version, owner, and current DOC-007 state before editing.
2. **Create or derive a draft.** Start a new DRAFT from the approved source. Restoration means deriving a new numbered draft, not reopening a retired version.
3. **Edit structured content.** Keep title, summary, description, destination, duration, highlights, inclusions, exclusions, itinerary, terms, frequently asked questions, and call to action consistent.
4. **Check pricing.** Confirm currency, amount or price-on-request, basis, qualifier, validity, selection, and order against approved commercial input. Never invent price or availability.
5. **Check media.** Verify allowed reference/type, rights, privacy, role/order, meaningful alternative text, and customer-safe content. Do not upload unlicensed or sensitive media.
6. **Check search engine optimisation (SEO).** Use the accepted metadata fields only; write accurate human-readable copy and avoid unsupported schema or misleading claims.
7. **Preview.** Inspect structured content, pricing, media, accessibility, responsive presentation, and customer safety together using fictional/test-safe data where applicable.
8. **Submit for review.** Save the latest draft, resolve conflicts, complete the publishing checklist, and submit. IN_REVIEW is sealed; it is not editable.
9. **Review and approve/reject.** An independent Approver checks content, commercial facts, media, accessibility, SEO, and publication readiness, then records a reasoned decision. Rejection requires a new derived draft.
10. **Schedule/publish/retire.** An Approver verifies effective pricing and clean public media, then publishes now or schedules an unambiguous future time. Verify the public projection. Retirement removes it while retaining history.

Quick checklist

Start-of-day checklist

- [] Confirm Editor/Approver role, assignments, approved commercial inputs, and media rights.
- [] Identify current published version and any active draft/review/schedule.
- [] Open DOC-006 publishing checklist and DOC-007 content lifecycle.

Top task checklist

- [] Edit only the current owned DRAFT and resolve version conflicts safely.
- [] Check content, pricing, media, SEO, accessibility, and preview.
- [] Submit once and confirm immutable IN_REVIEW.
- [] Keep review independent and reasoned.
- [] Verify schedule/public projection or retirement outcome.

End-of-day checklist

- [] Save eligible drafts and record their version/next owner.
- [] Hand over pending reviews, schedules, rights issues, and publication exceptions.
- [] Confirm no unapproved media/local customer data remains open or stored.

Common mistakes

- Editing or “correcting” an IN_REVIEW, APPROVED, PUBLISHED, REJECTED, or RETIRED version.
- Treating Restored as a status rather than a new-draft derivation.
- Publishing a valid layout with unapproved price, rights, accessibility, or effective time.
- Assuming planned discard or schedule-cancellation controls are available.

Do's and don'ts

Things you should always do

- Preserve versions, source relationships, reasons, and independent approval.
- Preview at Desktop, Tablet, and Mobile sizes and provide meaningful alternative text.
- Verify the effective public result after publish/schedule/retire.

Things you must never do

- Bypass review, self-approve where independence is required, or change state directly.
- Reuse rejected/retired versions in place or overwrite another editor's work.
- Publish personal data, unlicensed media, unsupported HTML/schema, or unverified commercial claims.

Escalation

Issue · Owner · Escalate when · Do not escalate when

Content/commercial ambiguity · Editorial/Commercial owner · Source facts conflict or approval is missing · A current approved source answers it

Version conflict · Content Lead · Refresh/compare cannot safely reconcile intent · You can reapply your intended edit to current draft

Rights/privacy/accessibility · Media or Privacy/Accessibility owner · Rights, consent, exposure, or equivalent text is uncertain · The approved asset record and checklist are complete

Schedule/public projection · Publisher/Operations · Effective time/result is wrong or uncertain · Scheduled time has not yet arrived

Service/permission fault · Administrator/Technical Operations · Accepted workflow or authorised access fails · The action is ineligible in current DOC-007 state

DOC-003 coordinates operational publication exceptions; Finance (DOC-004) owns financial records, not catalogue price copy approval.

Screenshot placeholder

Screenshot required — Figure 1: Content version desk route

Views: Desktop, Tablet, Mobile. Content: fictional package version history, preview, review, schedule, and public verification. Alternative text: Content workflow from editable draft to verified publication. Dependency: future accepted Content Studio capture environment.
