

# Finance Quick Start

Field · Value

Document ID · DOC-008-FI

Version · 0.8.0-draft.1

Product version · v0.8.0 target; accepted behavior through v0.7.0

Status · Draft

Owner · Finance Lead

Classification · Confidential — VirtCruise Finance Operations

Last reviewed · 2026-08-03

## Purpose

Triage Manual Finance and review work, handle proof safely, make controlled decisions, and verify downstream Financial and booking consequences.

## Who should use this guide

Authorised Finance Officers and Supervisors. You need approved Finance access, current Finance policy, secure work environment, and the DOC-004 checklists.

**Warning:** Proof is evidence, not confirmation of cleared funds. This guide does not replace DOC-002 through DOC-007, DOC-009, or DOC-010 and does not grant decision authority.

## Daily workflow

Check controls/queues → Claim eligible case → Inspect current safe proof  
→ Verify funds independently → Decide once → Verify downstream records  
→ Reconcile and hand over exceptions

## Top 10 tasks

- 1. Support Manual Finance.** Confirm the approved contact route, owned quote/invoice reference, and currency. Do not expose unapproved bank details or claim payment is recorded.
- 2. Triage the review queue.** Refresh; use supported server status/sort controls; open the exact case. Treat assigned, overdue, and completed views as queue conditions described in DOC-003.
- 3. Claim work.** Assign an eligible non-terminal case to yourself. Do not assign another reviewer; no reviewer directory/control is accepted.
- 4. Review proof safely.** Confirm it is current, ACCEPTED, scan CLEAN, and PDF/JPEG/PNG before **Securely view proof**. Keep it in the controlled viewer.
- 5. Start review.** Only when assigned, case PROOF\_RECEIVED, and proof meets viewing controls; confirm the case becomes UNDER\_REVIEW.
- 6. Approve.** Independently verify cleared funds; match customer, booking/invoice, amount, currency, reference, and account; check duplicates; enter a factual reason and truthful attestation; submit once.
- 7. Reject.** From eligible UNDER\_REVIEW, record a bounded factual reason and submit once. In the accepted backend, REJECTED is terminal.
- 8. Handle replacement.** Do not promise it. The Cycle 2 path is conditional and unavailable from accepted terminal REJECTED; use it only if a later authoritative case and approved policy explicitly permit it.
- 9. Check Payment and Receipt.** After approval, verify one Payment, exact allocation, one Receipt, balanced Ledger effect, updated invoice/account, and eligible notification. Never create or edit these directly from the portal.
- 10. Check booking progression.** Verify the Booking workflow evaluated its own policy. Partial/full payment, review approval, or Receipt issuance never directly authorises Finance to set CONFIRMED.

## Quick checklist

### Start-of-day checklist

- ☐ Confirm Finance access, policy, secure workspace, and escalation routes.
- ☐ Review pending/under-review/overdue work and prior handovers.
- ☐ Check proof, integration, reconciliation, and notification exceptions.

### Top task checklist

- ☐ Refresh and match case, customer, booking, invoice, currency, amount, and reference.
- ☐ Confirm assignment, current case state, current proof, and CLEAN scan.
- ☐ Verify cleared funds independently and check duplicates.
- ☐ Use one supported decision with reason/attestation.
- ☐ Verify Payment, allocation, Receipt, Ledger, booking, and notification separately.

### End-of-day checklist

- ☐ Reconcile completed decisions and downstream results.
- ☐ Hand over owned non-terminal cases and exceptions with safe references.
- ☐ Close proof viewers, remove unauthorised local copies, and sign out.

## Common mistakes

- Approving from the appearance of proof, a customer message, or a notification.
- Repeating a decision after timeout/conflict instead of refreshing authoritative state.
- Treating review APPROVED as Payment Recorded or Booking Confirmation.
- Offering replacement when the current accepted lifecycle makes rejection terminal.

## Do's and don'ts

### Things you should always do

- Work from refreshed authoritative records and complete the DOC-004 decision checklist.
- Keep evidence private, reasons factual, and identifiers exact.
- Stop and escalate on mismatch, duplicate, malware, privacy, ownership, or uncertain outcome.

**Things you must never do**

- Download/forward proof outside approved controls or open unsafe/superseded proof.
- Manually edit a Payment, allocation, Receipt, Ledger, invoice, booking, or lifecycle state.
- Blindly retry a mutation, resend a notification, or bypass suppression/assignment.

**Escalation**

Issue · Owner · Escalate when · Do not escalate when

Decision/policy/duplicate · Finance Supervisor · Authority, match, overpayment, duplicate, or lifecycle is unclear · Eligible case simply awaits your normal controlled work

Proof malware/missing/privacy · Security/Technical Operations · Immediately when safe access cannot be established · Scanner is legitimately still processing

Payment/Receipt/Ledger mismatch · Finance Operations · Expected downstream records disagree or exceed policy window · Processing remains within an approved observable window

Booking projection · Operations · Financial records complete but booking does not lawfully progress · Booking policy correctly retains current state

Notification failure/uncertainty · Notification Operations · Authoritative attempt failed or is uncertain · A valid intent is simply pending within policy

DOC-003 owns operational coordination; DOC-004 owns Finance procedure. Preserve state and references—never repair an exception by direct edit.
