

Support Quick Start

Field · Value

Document ID · DOC-008-SU

Version · 0.8.0-draft.1

Product version · v0.8.0 target; accepted behavior through v0.7.0

Status · Draft

Owner · Customer Support Lead

Classification · Confidential — VirtCruise Internal Support Operations

Last reviewed · 2026-08-03

Purpose

Verify customers, answer common questions, support account recovery, and route financial, operational, incident, privacy, and security issues safely.

Who should use this guide

New Support team members using approved support tools. No distinct released Support product role is established by v0.7.0 evidence; use only separately approved access.

Important: This guide does not replace DOC-002 through DOC-007, DOC-009, or DOC-010. It does not grant record access or authority.

Daily workflow

Review queue/incidents → Verify customer → Identify record and lifecycle
→ Resolve safe question or route → Confirm owner/customer update → Handover

Top 10 tasks

1. **Review active work.** Check assigned cases, acknowledged escalations, travel-imminent customers, known incidents, and approved service messages.
2. **Verify the customer.** Use the approved verification level for the requested information/action. Record pass/fail, never secret answers.
3. **Identify the issue.** Separate account, quote, booking, bank-transfer review, Payment, Receipt, notification, content, complaint, privacy, and security concerns.
4. **Use the exact reference.** Match the customer-owned quote, booking, invoice, Payment, Receipt, or support reference before discussing detail.
5. **Answer common questions.** Explain navigation and customer-visible meaning from DOC-002 and DOC-007. Do not reinterpret state or promise an outcome.
6. **Support password reset.** Direct the customer to **Forgot password**, newest valid email, and one-time link. Support never asks for a password, code, or reset link and never sets a password for them.
7. **Explain Manual Finance.** Point to the approved displayed Finance contact route/reference and unpaid/unconfirmed wording. Do not provide or validate bank details.
8. **Handle an application problem.** Capture UTC time, route/action, exact safe message, request/support reference, scope, customer impact, and one safe reproduction result; check known incidents.
9. **Escalate correctly.** Send the minimum facts to the accountable owner and retain customer communication until acknowledgement.
10. **Close or hand over.** Record verification outcome, facts, action, current authoritative state, customer wording, owner/reference, and next communication point.

Quick checklist

Start-of-day checklist

- ☐ Confirm approved Support access, routes, current incidents, and escalation contacts.
- ☐ Review assigned/open cases and high-impact/travel-imminent work.
- ☐ Open DOC-005 checklists/escalation matrix and DOC-007 status reference.

Top task checklist

- ☐ Verify identity and ownership at the required level.
- ☐ Match the exact business reference and lifecycle.
- ☐ Read the authoritative detailed record; use safe customer wording.
- ☐ Complete only approved troubleshooting; avoid duplicate actions.
- ☐ Resolve or obtain an acknowledged owner and record the next update.

End-of-day checklist

- ☐ Update customers whose approved communication point is due.
- ☐ Handover unresolved financial, travel, incident, privacy, security, or access risks.
- ☐ Remove unsafe notes/downloads, close records, and sign out.

Common mistakes

- Discussing protected details before verification or using excessive personal data.
- Treating a customer report, dashboard, email, or uploaded proof as authoritative state.
- Blindly resending notifications or repeating quote/payment/review actions.
- Diagnosing infrastructure, fraud, or staff fault to the customer.

Do's and don'ts

Things you should always do

- Show empathy, state verified facts, give the next owner/action, and maintain a clear case history.
- Check for known incidents and related duplicate cases before escalating.
- Escalate privacy/security exposure immediately and minimise further disclosure.

Things you must never do

- Ask for passwords, one-time codes, reset links, full payment details, or unnecessary proof.
- Promise availability, cleared funds, refund, booking confirmation, delivery, compensation, or resolution time without authority.
- Expose internal comments, reviewer identity, audit, storage, notification message bodies, or another customer's information.

Escalation

Issue · Owner · Escalate when · Do not escalate when

Quote/availability · Consultant · Current quote or itinerary needs business input · DOC-002/current quote already answers it

Transfer/Payment/Receipt/refund · Finance · Verification, mismatch, missing record, or decision required · Customer only needs the approved Finance route

Booking/travel/cancellation · Operations · Progression conflict, fulfilment risk, or travel impact · Current state/action is clear and expected

Access/role · Administrator · Valid recovery fails or approved role access differs · User has not completed safe standard steps

Outage/repeated fault/notification · Technical Operations · Multi-user impact, known-service symptoms, or authoritative delivery failure · Isolated correctable input error

Privacy/security · Security/Privacy · Immediately for exposure, compromise, phishing, or malicious content · Never perform an amateur investigation

DOC-003 owns operational escalation and DOC-004 owns Finance decisions. Do not escalate when a safe documented answer resolves the issue and no risk or ownership transfer remains.
